PERSONAL PROJECTS

Task Manager - MERN STACK (01/2023 - 02/2023)
- Developed a full-fledged Task Manager from scratch, using MERN Stack as the primary technology stack.
- Task Manager application provides user-friendly features including secure login, registration, and logout functionalities. Users can efficiently manage tasks with options to create, update, delete, and search tasks by title, status, and priority.
- The application also includes profile management, seamless navigation, and advanced user experience enhancements such as pagination, password visibility toggling, and loading indicators. Powered by Redux Toolkit, it ensures efficient state management and incorporates a debounce feature for optimized searching.

NetflixGPT Clone (03/2023 - 07/2023)
- Developed a full-fledged NetflixGPT Clone from scratch, using ReactJS as the primary technology stack.
- Implemented Redux store using userSlice for user related actions and data.
- Registered for the TMDB API, fetched movies list, and created a custom hook for data retrieval.
- Implemented a multi-language feature to make our app more accessible and user-friendly.
